The antibodies neutral KDR activation. The immunoglobulin may be a multivalent single chain antibody, a diabody, a diabody, a diabody, a humanised antibody or a chimerised antibody, a triabody, a humanised antibody or a chimerised antibody. The immunoglobulin molecules bind specifically to an extracellular domain of the KDR receptor with the same affinity a VEGF. Overexpression of VEGF has been implicated in a number of human tumour cell lines including glioblastoma multiforme, hemangioblastoma, central nervous system neoplasms and AIDS associated Karposi's sarcoma. The antibodies therefore have applications in treating these conditions. This sequence encodes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                regression or arrest of the condition while minimising or preventing significant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a vascular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1011. Conditions that can be treated include a neoplasm, a collagen-vascular disease or an autoimmune disease, especially a solid tumour, including breast carcinoma, lung carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma, colon carcinoma, prostate carcinoma (all claimed).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of the light chain variable region of IMC-IC11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibod or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce

Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is mouse anti-KDR p1C11 scFv antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC antigen-binding site located to the N terminus of immunoglobulin (1g)
CC light chain constant domain (CI domain), and P2 has an antigen-binding
CC site located to the N terminus of the CH1 domain. (I) is useful for:
CC reducing the activation of a vascular endothelial growth factor
CC (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis;
CC reducing endothelial cell proliferation; inhibiting ungiogenesis;
CC discipling endothelial cell proliferation; inhibiting ungiogenesis;
CC interpolation of human leukaemia cells; blocking interaction of a protein and comparation of human leukaemia cells; blocking interaction of a protein and comparation of invitro for investigative, diagnostic or treatment comparation. (I) in provides for efficient production so that comparation of (I) provides for efficient production so that comparation of the desired configuration. (I) is bivalent and bispecific, homogeneous and in tetrameric form. The heavy chain constant domains which constitute the FC region (e.g., CH2 and CH3 for an IgG molecule) of a natural continuous and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. This sequence represents a light chain variable domain (VH) incorporated conto Pv, an engineered protein containing a heavy chain variable domain containing a heavy chain, described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a mouse protein relating to the bispecific antibodies that bind to the VEGF receptors of the invention.
                                                                                                                                                                                                                                                                                             Vascular endothelial growth factor receptor; VEGFR; antagonist; tumour; cytostatic; light chain; myelocytic leukaemia; lymphocytic; erythrocytic; monocytic; multiple myeloma; lymphoid cell; Hodgkin's disease; chimeric; human; plCll vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for treating tumors -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a method for inhibiting the growth of non-solid cumour cells that are stimulated by a ligand of vascular endothelial crowd the factor receptor (VEGRR) in mammals particularly humans. The method involves treating the mammals with humanised VEGRR monoclonal antibodies (antagonists). Humanised monoclonal antibody comprises humanised mouse variable region joined to human constant region, where the humanised mouse complementarity determining region (CDR) grafted into human variable region. The method is useful for treating leukaemias such as acute or chronic lymphocytic leukaemia, crythrocytic or monocytic leukaemia, crythrocytic or monocytic leukaemia, multiple myelomas and lymphoid cells, particularly those related to non-Hodgkin's and Hodgkin's disease. The present sequence is chimeric plCll light chain fragment which is used for the construction of chimeric plCll light chain contains cloned variable light chain (VL) and human kappa light chain constant region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                          S
                                                                                                                                                                                                                                                                                 The present sequence is that of the light chain variable region of IMC-1C11, a mouse-human chimeric antibody that has vascular endothelial growth factor (VEGF) antagonist activity. The antibody, or a fragment of it, can be used as an anti-angiogenic molecule, together with a chemotherapeutic acid, for the treatment of an angiogenic dependent condition in a mammal, especially a human. The invention relates generally to a method of treating or controlling an angiogenic dependent condition by administering an anti-angiogenic molecule and a chemotherapeutic agent, to produce a regression or arrest of the condition while minimising or preventing significant toxicity of the chemotherapeutic agent. The anti-angiogenic molecule inhibits or blocks the action of a consciular endothelium survival factor such as VEGF or its receptor, and is especially IMC-1011. Conditions that can be treated include a neoplasm, a collagen-vascular disease, or an autoimmune disease,
                                                                                                                         Matches 106;

                                                                                                                                                                                  to kinase insert domain-containing receptor (\overline{\text{KOR}}) (a human homologue of mouse foetal liver kinase (\overline{\text{FiK}})-1 receptor) with an affinity comparable to human vascular endothelial growth factor (\overline{\text{VEGP}}) and that neutralises activation of KDR. Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is mouse anti-KDR plCll scFv antibody light chain variable region (\overline{\text{VL}}).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mouse;

Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is KDR binding immunoglobulin related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Mouse; immunoglobulin; kinase insert domain-containing receptor; KDR; foetal liver kinase; FLK-1 receptor; vascular endothelial growth factor; VEGF; tumour growth; heavy chain variable region; VH; angiogenesis; p1C11; scFv antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           to kinase insert domain-containing receptor (KDR) (a human homologue of mouse foetal liver kinase (FLK)-1 receptor) with an affinity comparable to human vascular endothelial growth factor (VEGF) and that neutralises activation of KDR. Sequences of the invention are useful for neutralising the activation of KDR, for reducing tumour growth and for inhibiting angiogenesis. The present sequence is KDR binding immunoglobulin related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Mouse;

                                                                                                                                                                           CC complex of two polypeptides (PI) and two second polypeptides (P2) which CC are stably associated in an immunoglobulin like complex. PI has an CC antigen-binding site located to the N terminus of immunoglobulin (Ig) (Site located to the N terminus of immunoglobulin (Ig) (C) site located to the N terminus of the CHI domain. (I) is useful for: CC returnising the activation of avascular endothelial growth factor (VEGF) receptor; reducing tumour growth; inhibiting angiogenesis; CC reducing endothelial cell proliferation, inhibiting vEGF induced (C) migration of human leukaemia cells; blocking interaction of approtein and CC and in vivo and in vitro for investigative, diagnostic or treatment (C) and in vivo and in vitro for investigative, diagnostic or treatment (C) in the design of (I) provides for efficient produced are assembled in the desired configuration. (I) is bivalent and bispecific, homogeneous in the desired configuration. (I) is bivalent and bispecific, homogeneous can be region (e.g., CH2 and CH3 for an 1gG molecule) of a natural (C) antibody and which provide other antibody functions can be present. There is no requirement for processing in vitro to obtain the complete product. (ScFv), an engineered procein containing a variable light and variable for interaction on one polypeptide, described in the method of the

                                                                                                                                                                                                                                       The invention relates to a novel antibody having a first antigen binding site specific for a first vascular endothelial growth factor (VEGF) receptor and a second antigen-binding site specific for a second VEGF receptor. The bispecific antigen-binding proteins block activation of the VEGF receptor and are useful for reducing or inhibiting VEGF-induced cellular functions such as mitogenesis of vascular endothelial cells and migration of leukaemia cells. The antibodies are useful for treating tumours and for in vivo or in vitro for investigative and diagnostic methods. This sequence represents a mouse protein relating to the bispecific antibodies that bind to the VEGF receptors of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New bispecific antibodies having antigen-binding sites specific for a first vascular endothelial growth factor (VEGF) receptor and for a second VEGF receptor, useful for inhibiting migration of leukemia cells, or for treating tumors -
